● Resilient Ingestion Engine v2.4

Get data out of platforms that **actively resist it.**

Acdyon Ingest bypasses Cloudflare, fingerprinted headless browsers, and rate-limiting. Built with self-healing DOM selectors to keep your pipelines running when markup changes.

client.js

[Copy](#)

```
import { AcdyonIngest } from '@acdyon/ingest';

const client = new AcdyonIngest({
  apiKey: process.env.ACDYON_KEY,
  behavior: 'stealth-dynamic'
});

const data = await client.extract({
  url: 'https://linkedin.com/jobs/search',
  schema: {
    title: '.job-card-title',
    company: '.company-name',
    salary: '.salary-range'
  },
});
```

**acdyon ingest**

```
options: {  
  rotateFingerprint: true,  
  solveCaptchas: true,  
  autoHealSelectors: true  
}  
});  
  
console.log(`Extracted ${data.length} jobs successfully!`);
```

The Self-Healing Pipeline in Action

Most scrapers break silently when target websites update their class names. Acdyon Ingest maps the structural relationship of the DOM and automatically corrects selector paths in real time.

2:02:22 PM [INFO] Applying JA3 TLS fingerprint match...

2:02:22 PM [SUCCESS] Challenge resolved. HTTP/2 stream established.

2:02:22 PM [WARN] Target selector ".job-card-title" returned 0 nodes. Structural shift suspected.

Engineered to bypass detection, not just scrape.

Modern anti-bot tools monitor everything from WebGL parameters to your TCP/IP window size.
Here is how we ensure data delivery.

TLS & Headless Spoofing

We mimic real browser network stacks including HTTP/2 settings, TLS Client Hello fingerprints, Canvas noise, and navigator parameters.

**acdyon ingest**[Try Free Sandbox](#)

Adaptive Request Pacing

We schedule requests using poisson-distribution delay models to mimic human scrolling and navigation, throwing off behavioral detectors.

Automatic DOM Healing

When class names change from `.job-title` to `.ab-x98s`, our engine maps structural paths and text content matching rules to auto-correct queries.

Try it Yourself

Enter a simulated target URL to run through the extraction pipeline. Observe how the engine selects proxy nodes, resolves challenges, and extracts content.

GET `https://linkedin.com/jobs/search?q=engineer`

```

An Honest Approach to Ingestion

We do not fabricate testimonials from "Fortune 500 VPs" or list fake logos of clients we don't have. We sell robust infrastructure directly to developers who know the value of reliable data collection.

[Try Free Sandbox](#)

Our Stance on Scraping Compliance: We build in respect for robots.txt and rate-limits unless instructed otherwise by explicit header overrides. We believe in getting public web data responsibly, without burdening host server capacities.

- ✓ **No Inventory Padding:** We scale proxies on demand. Our advertised capacity reflects actual real-time node availability.
- ✓ **Direct Engineering Support:** Support tickets are routed straight to the team writing the core engine.

acdyon ingest

Premium data extraction tooling that engineers trust.
